DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 – 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reiss et al. (US 5,743,895) and further in view of Cook et al. (US 5,562,740).

With respect to claim 1, Reiss et al. (hereinafter "Reiss") discloses a disposable diaper comprising an exterior layer comprising a non-woven material having a planar, soft, cloth-like surface layer, a core layer comprising a wood pulp, a containment layer coupled to a fist side an a second side of the core layer, a distribution layer coupled to the containment layer and an interior layer coupled to the distribution layer comprising a non-woven liquid permeable layer as set forth in col. 2, line 55 to col. 3, line 4.

The difference between Reiss and claim 1 is the provision that the core layer is made of a non-chlorine bleached material.

Cook et al. (hereinafter "Cook") teaches a non-chlorinated bleached wood pulp as set forth in the abstract and in col. 5, line 63 to col. 6, line 3.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a non-chlorinated bleached wood pulp because it is well known in the art that wood pulp may be bleached in order to achieve brightness and increase consumer appeal as taught by Cook in col. 5, lines 62 – 63.

Application/Control Number: 10/768,376

Art Unit: 3761

Likewise, it is well known in the art that the use of elemental chlorine as a bleaching agent has decreased because it is difficult to handle and potentially hazardous to both the mill personnel and equipment. Additionally, the use of chlorine as a bleaching agent has decreased due to the concern expressed by the United States Environmental Protection Agency that the element might be toxic to humans and animals.

As to claims 2, Reiss discloses a diaper further comprising a leakage protection layer coupled to the exterior layer for preventing waste material from leaking out of the disposable diaper as set forth in figure 3.

As to claim 3, see the rejection of claim 1.

Regarding claims 4, 10 and 16, Reiss discloses a disposable diaper having a multi-layered diaper assembly wherein the core layer further comprises a superabsorbent mixture as set forth in col. 4, lines 29 – 41.

With respect to claims 5 - 6, 8, 11 - 12, 14, 17 - 18 and 20, the examiner contends that it would have been obvious to one of ordinary skill in the art to modify the exterior layer to provide the claimed materials because the use of such materials is well known in the art.

As to claims 7, 13 and 18, wee the rejection of claim 1.

With reference to claim 9, Reiss in view of Cook disclose a chlorine free disposable diaper having a multi-layered diaper assembly comprising: an exterior layer comprising a non-woven material having a planar, soft, cloth-like surface layer; a leakage protection layer coupled to the exterior layer for preventing waste material

Art Unit: 3761

from leaking out of the disposable diaper; a core layer made of non-chlorine bleached wood pulp for holding the waste materials within the disposable diaper; a containment layer coupled to a first side and a second side of the core layer for containing the waste material in the core layer and away from skin of a wearer; a distribution layer coupled to the containment layer for evenly distributing waste material to the core layer; and an interior layer coupled to the distribution layer comprising a non-woven liquid permeable material as set forth in the rejection of claim 1.

As to claim 15, Reiss in view of Cook disclose a method of providing a chlorine free disposable diaper having a multi-layered diaper assembly comprising: forming an exterior layer comprising a non-woven material having a planar, soft, cloth-like surface layer; coupling a leakage protection layer to the exterior layer for preventing waste material from leaking out of the disposable diaper; forming a core layer made of non-chlorine bleached wood pulp for holding the waste materials within the disposable diaper; coupling a containment layer to a first side and a second side of the core layer for containing the waste material in the core layer and away from skin of a wearer; coupling a distribution layer to the containment layer for evenly distributing waste material to the core layer; and coupling an interior layer to the distribution layer comprising a non-woven liquid permeable material as the method would necessarily flow from the apparatus as disclosed in the rejection of claim 1.
